HTML	Express JS
CSS	Node JS
PHP	MongoDB
Wordpress	React Native
Figma	Android Studio
Photoshop	

EDUCATION

Bachelor of Applied Science of Computer

Telkom University
2016-2020

WORK EXPERIENCE

Full Stack Developer
Code For Asia
2021 - 2023

During my time at Code for Asia, I played a pivotal role in various projects and responsibilities. My primary focus was on enhancing the functionality of EDVengers, a platform powered by React JS, Express JS, MongoDB, and Node JS, where I developed new features based on user stories and led a team of interns in creating various EDVengers features. Additionally, I had the exciting opportunity to implement tokenization using the Solana blockchain to expand EDVengers' capabilities. Beyond this, I also contributed to the development of the Code For Asia website, utilizing WordPress to create an engaging online presence for the organization.

Intern Android Dev
Samudera Aplikasi Indonesia
January 2020 - May 2020

During my time at Samudera Aplikasi Indonesia, I developed front-end interfaces for "Esaku for Student" and "Esaku for Teacher," Android apps designed for students and teachers. Working with UI/UX designers, I translated their designs into functional interfaces using Android Studio. I also integrated these interfaces with existing APIs for a seamless user experience.

Intern Junior Dev
Roketin Indonesia
May 2018 - August 2018

During my time at Roketin Indonesia, my primary role was to develop a critical microservice. This microservice bridged two distinct websites built using different technologies – one utilizing Laravel and the other WordPress. Its primary function was to ensure that any updates made to one website were seamlessly reflected on the other, despite their differing database structures. This project required innovative solutions to harmonize the websites' functionalities and data synchronization, ultimately enhancing their overall performance and user experience.
